

# BIG BAR LANDSLIDE UPDATE

SEPTEMBER 1, 2019

 Incident Webpage

 BC River Forecast

*Rock scalars continue their work to restore passage through the landslide.*

*Salmon work their way upstream.*

- A trial will be undertaken today of having crews start fishing earlier, when catches tend to be higher, to increase the efficiency and effectiveness of fishing efforts.
- After cultural heritage and archaeological assessments were completed, work on the east side of the river has commenced. A helipad has been constructed, and further rock scaling is required before anchors can be installed that will facilitate further work to restore natural passages through the landslide.
- Tests of the road and systems to load and unload salmon for ground transport have gone well. However, ground transport was delayed yesterday due to a mechanical issue with the truck. It is currently undergoing repairs and is anticipated to be operational shortly.
- Salmon continue to swim past the blockage. To date, an estimated 20,521 salmon have swum through the passage.
